

Dear colleagues,

thank you for your interest in our book. We received a lot of requests to share the book contents, which we have to decline because we are not allowed to do so as per our contract with the publisher. We hope you all understand that we do not want to breach this contract.

What we can share with you here are

- (1) A 20% discount voucher that can be used to purchase the book from the publishers web site, if you are interested to do so. See the next page in this pdf document, in particular the info at the bottom for the website link to purchase the book and the required checkout code to apply the discount. Note that this discount is valid all the way through to January 2022.
- (2) The link to the R material chapters that accompany the book. These are freely accessible as pdf or html (including the necessary data to run the R code) at

<https://digital.csic.es/handle/10261/221270>

All the best, in the name of all authors,

Functional ecology is the branch of ecology that focuses on various functions that species play in the community or ecosystem in which they occur. This accessible guide offers the main concepts and tools in trait-based ecology, and their tricks, covering different trophic levels and organism types. It is designed for students, researchers and practitioners who wish to get a handy synthesis of existing concepts, tools and trends in trait-based ecology, and wish to apply it to their own field of interest. Where relevant, exercises specifically designed to be run in R are included, along with accompanying on-line resources including solutions for exercises and R functions, and updates reflecting current developments in this fast-changing field. Based on more than a decade of teaching experience, the authors developed and improved the way theoretical aspects and analytical tools of trait-based ecology are introduced and explained to readers.

Preface; 1. General Introduction; 2. Trait Selection and Standardization; 3. The Ecology of Differences: Groups vs. Continuum; 4. Response Traits and the Filtering Metaphor; 5. Community Metrics; 6. Intraspecific Trait Variability; 7. Community Assembly Rules; 8. Traits and Phylogenies; 9. Effects of Traits on Ecosystems Processes and Services; 10. Response and Effect Traits across Trophic Levels; 11. Trait Sampling Strategies; 12. Applied Trait-Based Ecology; References; Index.
